

Peugeot bebe 1913 Clutch Housing

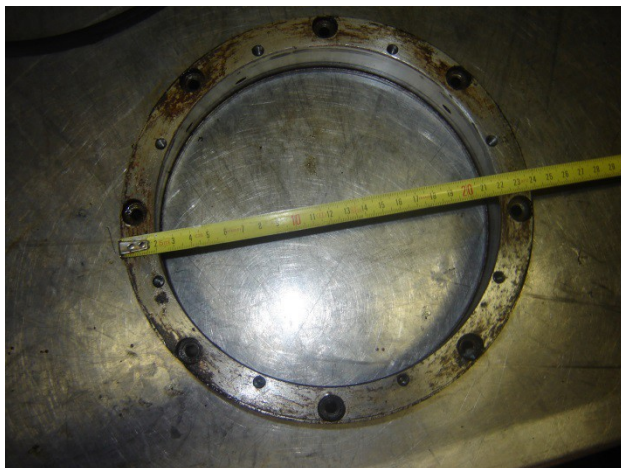

Outer size = 240 mm inside

Measure block side = 241 mm

inside measure drive shaft side = 198 mm

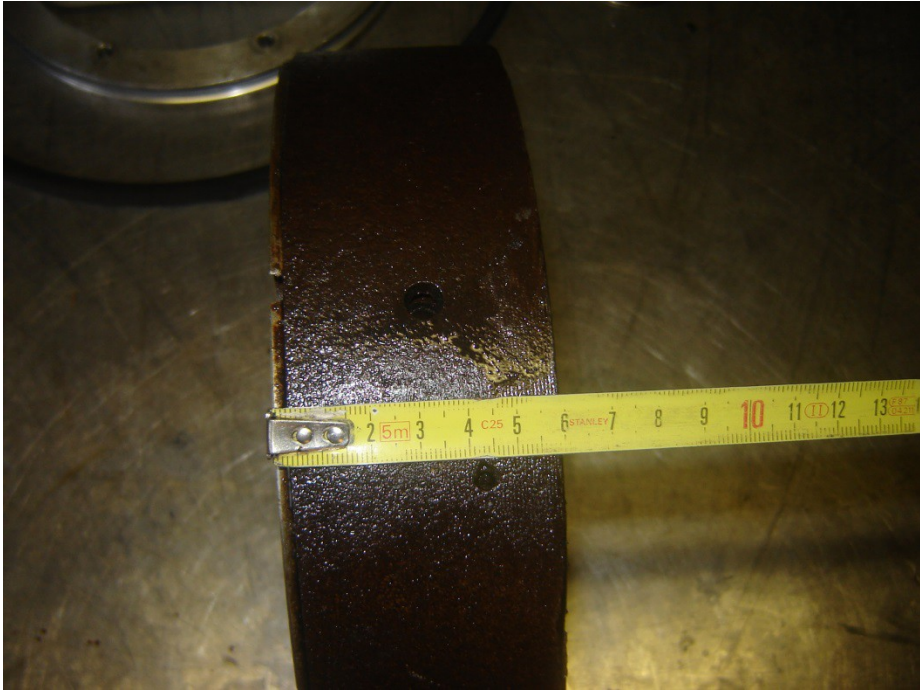

height = 60 mm

Bolts with 8 bolts put Link House is 8 x Hex m6 x 86 mm

The starter wreath (see specs mounted Later dynastart dynostart) with 8 bolts put m6x 34 mm. D stitch off the 8 mounting bolts where the link House = 222 mm and the stitch of the starter wreath is 207 mm, Also there is a link in the house edge is 10 mm wide and 5 mm from the inside where this floor in the House is for I don't know yet what I do know is that by that edge the clutch plate there

hard will. Is there to remember to a bevel to the lining of the clutch plate where by he is easier to remove.

You'll also see that there is a link to the house edge is turned to the dynastart wreath to be fitted better the diameter of what has been removed are 230 mm and the height of what is extracted is off 3mm

A picture of the inside edge depth of the edge is 2 mm so the sizes of the inside edge are 5 mm and 10 mm wide and 2 mm deep.
